

# React Assignments

Code:-

App.js

```
<div>  
<h1>Project Showcase</h1>  
<p>Your gateway to amazing design projects.</p>  
</div>
```

Output:-

Counter.jsx

```
import { useState } from "react";

export default function Counter(){
  const[like,setLike]=useState(0);
  return(
    <div>
      <p>Total Likes: {like}</p>
      <button onClick={()=>setLike(like+1)}>Like</button>
```

```
    </div>
  );
}
```

Total Likes: 9

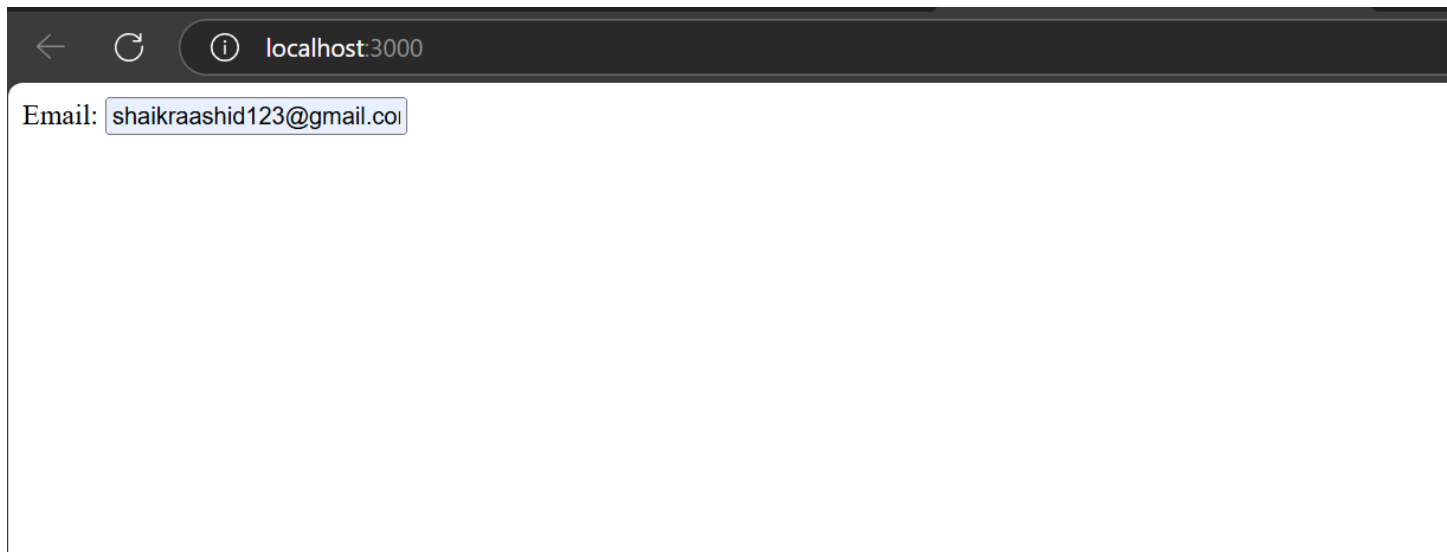

Like

## ControlledComponents.jsx

```
import { use, useState } from "react";
```

```
export default function ControlledComponents(){
  const[email,setEmail]=useState("");
  return(
```

```
    <div>
      <label>Email: </label>
      <input type="text" value={email}
onChange={(e)=>setEmail(e.target.value)}/>
    </div>
  );
}
```

## Code

```
import { useState } from "react";

export default function ConditionalRendering(){
  const[day,setDay]=useState(true);
```

```

return(
  <div>
    <button onClick={()=>setDay(!day)}>Switch to {day ?
'Night':'Day'}</button>
    <p>Current Mode: {day ? 'Day' : 'Night'}</p>
  </div>
);
}

```

App.js

```

export default function App() {
  return (

    <div>
      <Propstry name="Abdul Raashid"/>
      <Propstry name="Abdul Muyeed"/>
      <Propstry name="Shaik Naveed"/>

    </div>

```

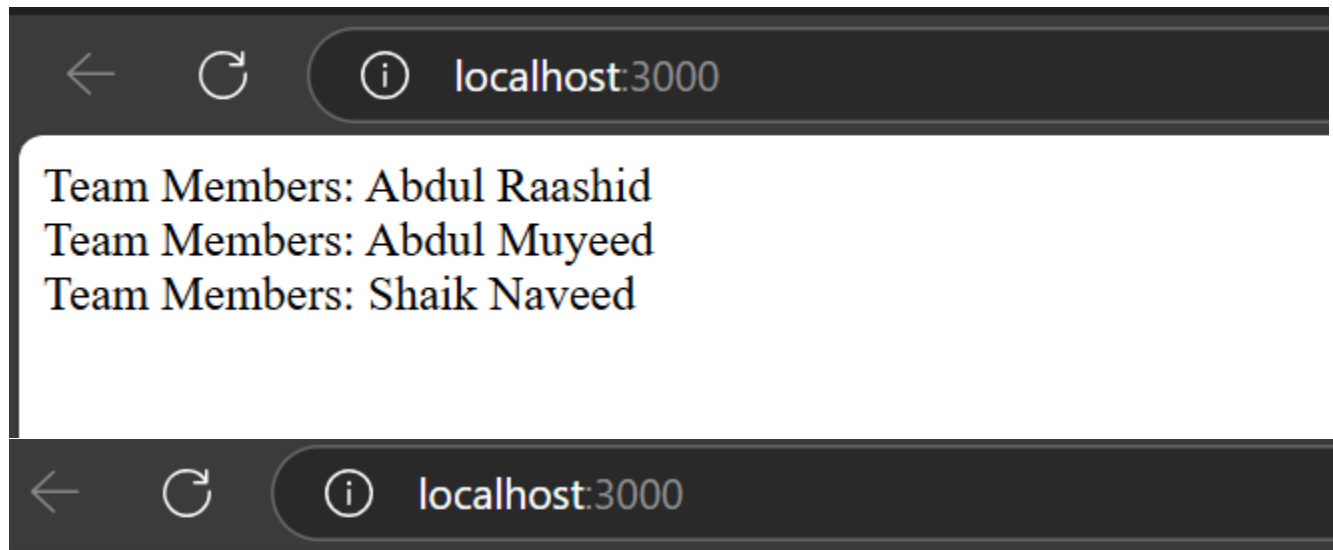

Propstry.jsx

```

export default function Propstry({name}){
  return(
    <div>

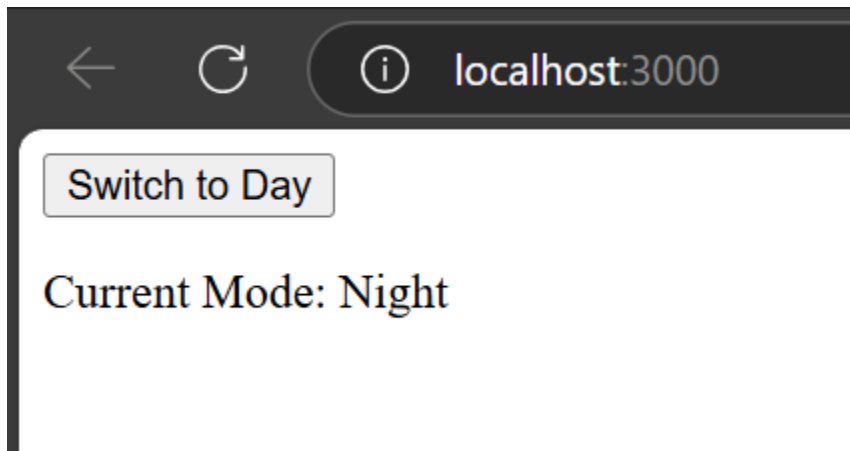

```

```
    Team Members: {name}  
</div>  
);  
}
```

Switch to Night

Current Mode: Day

DynamicRendering.jsx

```
export default function DynamicRendering(){
  const [items, setItems] = useState(['Bread', 'Milk', 'Eggs']);
  return(
    <div>
      {items.map((item, index) => (
        <li key={index}>
          {item}
        </li>
      ))}
    </div>
  )
}
```

## Code

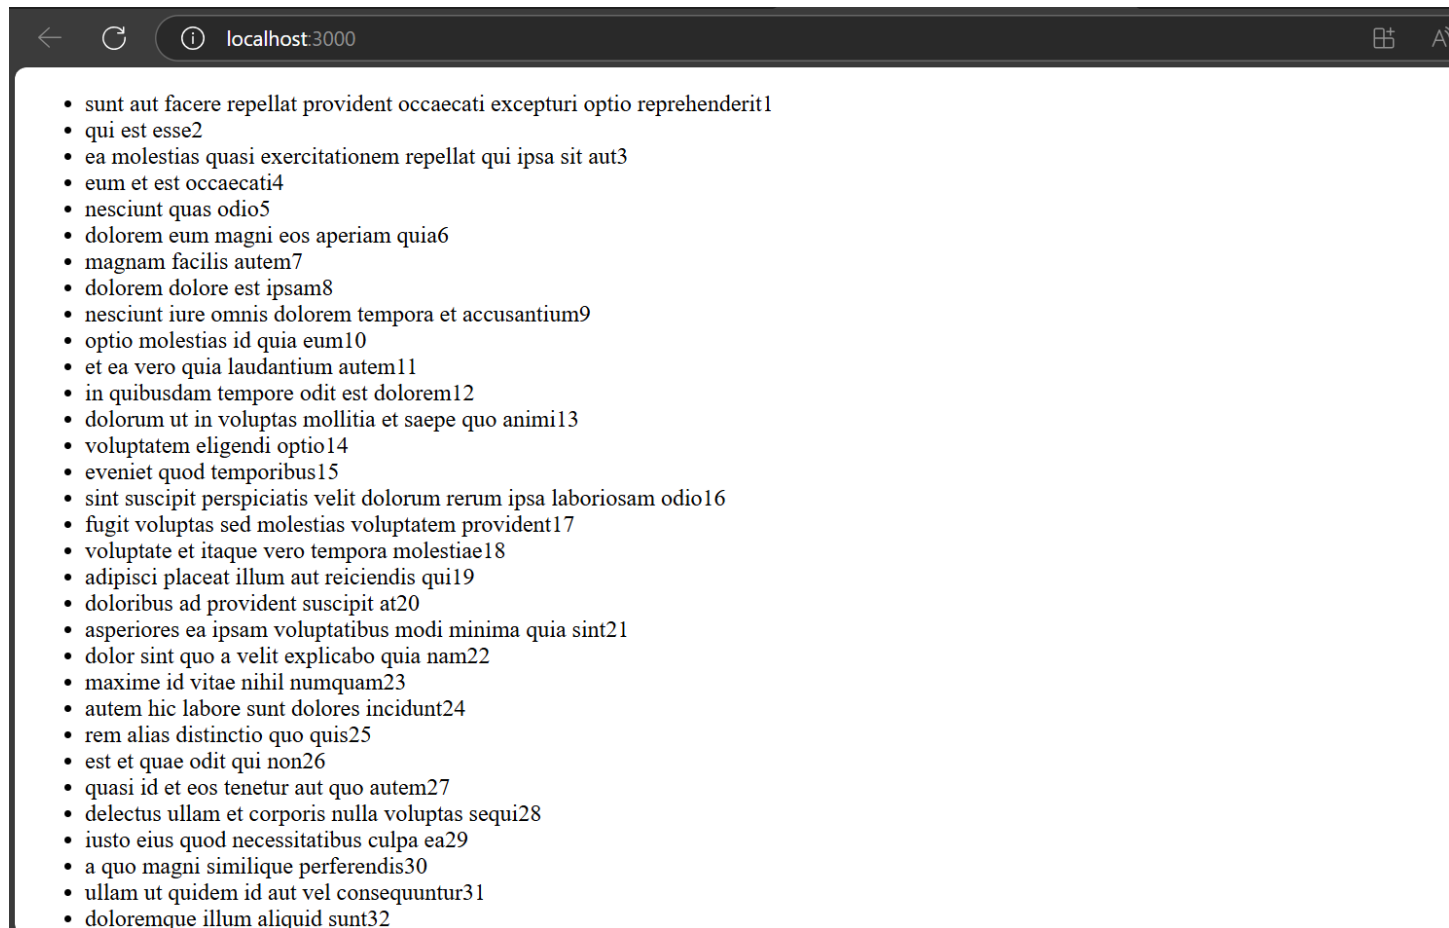

```
<h1 style={{ color: 'teal', textAlign: 'center' }}>Join Our  
Newsletter</h1>  
.ctaButton {  
background-color: orange;  
color: white;  
padding: 10px 20px;  
border: none;  
}  
import styles from './Button.module.css';  
<button className={styles.ctaButton}>Subscribe</button>
```

```
import { useEffect, useState } from "react";
```

```
export default function UseEffect(){  
  const[data,setData]=useState([]);  
  const[error,setError]=useState([]);  
  useEffect(()=>{  
    fetch('https://jsonplaceholder.typicode.com/posts')  
    .then((res)=>res.json())  
    .then((datas)=>setData(datas))  
    .catch(console.error(error))  
  },[])  
  return(  
    <div>
```

```
    <ul>
      {data.map((d,index)=>(
        <li key={index}>
          {d.title}
          {d.id}
        </li>
      ))}
    </ul>
  </div>
);
}
```

useFetch.js:

```
import { useState, useEffect } from 'react';
export function useFetch(url) {
  const [data, setData] = useState(null);
  const [loading, setLoading] = useState(true);
  useEffect(() => {
    fetch(url)
      .then(response => response.json())
      .then(json => {
        setData(json);
        setLoading(false);
      });
  }, [url]);
  return { data, loading };
}
```

App.js:

```
const { data, loading } =  
useFetch('https://jsonplaceholder.typicode.com/users');
```

```
if (loading) return <p>Loading...</p>;  
return (  
  <ul>  
    {data.map(user => (  
      <li key={user.id}>{user.name}</li>  
    ))}  
  </ul>  
);
```
